DETAILED ACTION

1. The references cited in the Search Report of 14 April 2003 from the USPTO have been considered, but will not be listed on any patent resulting from this application because they were not provided on a separate list in compliance with 37 CFR 1.98(a)(1). In order to have the references printed on such resulting patent, a separate listing, preferably on a PTO/SB/08A and 08B form, must be filed within the set period for reply to this Office action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Scicluna et al (US 6,105,764).

Claim 1: Scicluna discloses a case **10** for holding a laptop computer comprising opposed outer surfaces **26/28**, a main storage compartment **20** defined by at least some of the sides **30/32/34/36**, an access opening **38**, and a system **40** for automatically gripping the opposed main surfaces of a laptop computer whereby the computer may be held away from at least some of the sides of the case to help prevent damage.

Art Unit: 3728

Claims 2 and 3: Scicluna is arranged for automatic opening and closing as claimed (see for example Figure 3).

Claim 7: Scicluna discloses gripping members 42/44.

Claim 8: Scicluna discloses gripping members 42/44 extending across a width dimension.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 3728

3. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Scicluna et al, as applied to claim 2 above, and further in view of Hollingsworth et al (US 6,334,533).

Claim 4: Scicluna includes means **62** for mechanically connecting the system **40** with the opening. Scicluna discloses the claimed invention except for the clamshell-type opening (the zipper is considered a latch). Hollingsworth teaches an access opening **30** that extends to the base portion, thereby forming a clamshell-type hinged opening. It would have been obvious to one of ordinary skill in the art at the time the invention was made to extend the zipper of Scicluna to the base as taught by Hollingsworth in order to increase access to the interior compartment.

Claim 5: Scicluna discloses peripheral frames **42/44**.

Claim 6: Scicluna discloses flexible fabric **26/28** with the system for automatically gripping being connected to frames **42/44** such that pressure is not applied to the fabric upon gripping.

Allowable Subject Matter

4. Claims 9-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
